

Hydraulic Axial Piston Polyurethane Metering Rexroth A2VK Pump

A2VK12, A2VK28, A2VK55, A2VK107 pump

www.hydpump.com

Open or Closed Circuit Functions

Type A2VK12, A2VK28, A2VK55, A2VK107

Series 1 and 4

Nominal pressure 250 bar

Maximum pressure 315 bar

Polyurethane metering pump

Features

- Chemical Froth Hydraulic Axial Piston Polyurethane Metering Pump
- High metering accuracy and reproducibility of the variable pumped volumes
- Robust manual adjustment via hand wheel with integral precision measuring scale
- Operating pressure up to 250 bar
- Low pulsation of the pumped medium
- Pump components are compatible with the pumped media (polyol, isocyanate) due to special pairings of materials and sealing elements
- Low-noise
- Excellent volumetric efficiency for high metering accuracy
- Double shaft seals with buffer fluid ports to guarantee safe operation (and protect the environment)
- With corrosion protection

Technical data

Fluid

The pump pumps and meters fluids for manufacturing polyurethane (polyol and isocyanate components).

Operating viscosity range

The following limitconditions apply:

v_{\min} _____ 1 mm²/s,

v_{\max} _____ 2000 mm²/s

Please contact us if higher values are required.

Operating temperature range

Optimum operating temperature range t _____ 10-50°C

Maximumoperating temperature t_{\max} _____ 80°C

The permitted working temperature depends on the lubricity of the fluid. The maximum fluid temperature must not be exceeded even locally (e.g. no more than 5K over the leakage fluid temperature).

Filtering the fluid

The filter should be arranged so that only filtered fluid enters the pump. The finer the filter, the longer the service life of your axial piston pump.

We recommend a filter grade $\eta_{abs.} \leq$ _____ 125 µm

Operating pressure range

Input

Open circuit:

Max. fillingpressure at the port S $p_{\max \text{ abs.}}$ _____ 10 bar

Min. fillingpressure at the port S $p_{\min \text{ abs.}}$ _____ 1 bar

The pump must always be filled completely.

Closed circuit:

Leakage fluidpressure $p_{\max \text{ abs.}}$ _____ 10 bar

Max. intermittent cumulative pressure A + B p_{\max} _____ 250 bar

Output

Maximum pressure at port A or B
(pressure data according to DIN 24312)

Nominal pressure p_N _____ 250 bar

Maximumpressure p_{\max} _____ 315 bar

Leakage fluid

Max. leakage fluid pressure $p_{L \max}$ _____ 10 bar

In the closed circuit, pump ports A and B are separated from the housing space. The leakage fluid must be removed via port T₁ or T₂ using a separate line.

In the open circuit, the suction port S is connected to the housing space. There is no need for a line for the leakage fluid. Ports T₁ and T₂ are plugged. The fillingpressure at port S acts on the shaft sealing ring via the housing space.

The service life of the shaft sealing ring decreases as the pressure of the leakage fluid or the fillingpressure at port S increases.

Through put flow

Swivel direction	Direction of rotation "clockwise"		Direction of rotation "anti-clockwise"	
	open circuit	closed circuit	open circuit	closed circuit
clockwise	S to B A plugged	A to B	S to A B plugged	B to A
anti-clockwise	S to A B plugged	B to A	S to B A plugged	A to B

Installation position

Any. The pump must be completely filled with fluid. If installed with the shaft pointing upwards, the top leakage fluidport must be connected to the housing for both types of circuit to ensure that the housing is vented in the vicinity of the bearing.

Preferred installation position: drive shaft horizontal

The adjustment display in the hand wheel can only be guaranteed to work if the adjusting spindle is installed -30° to +30° from the horizontal.

Table of values

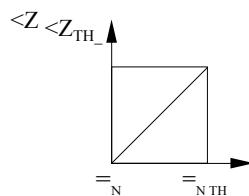

Size	$V_{g \text{ max}}$	cm^3	12	28	55	107
Displacement	$V_{g \text{ max}}$	cm^3	11.6	28.1	54.8	107
Flow ¹⁾ at speed n	$q_{v \text{ max}}$	l/min	8.3	20	39.1	76.3
	n = 735 rpm	l/min	10.9	26.4	51.6	100.7
	n = 1450 rpm	l/min	16.3	39.5	77.1	150.5
	n = 1800 rpm	l/min	20.3	49.1	95.7	186.8
Power at $\Delta p = 250$ bar and speed n	P_{max}	kW	3.4	8.3	16.3	31.8
	n = 735 rpm	kW	4.5	11	21.5	41.9
	n = 1450 rpm	kW	6.8	16.5	32.1	62.7
	n = 1800 rpm	kW	8.4	20.4	39.9	77.8

¹⁾ Includes 3% loss of displacement

Control unit MA

Turning the handwheel turns a self-locking threaded spindle which steplessly adjusts the pump's swivel section, and thus the volumetric flow in the range from $V_{g \text{ o}}$ to $V_{g \text{ max}}$.

Characteristic

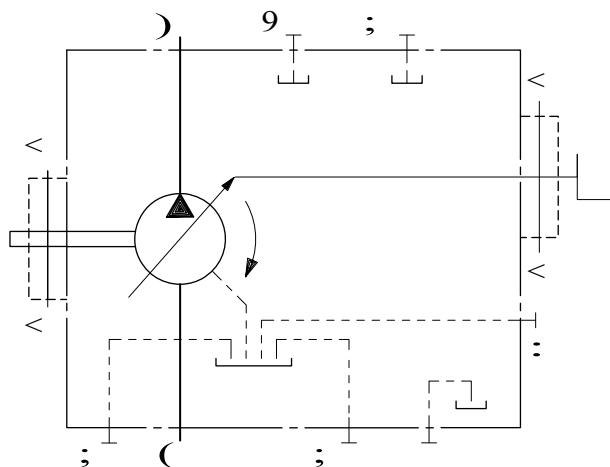

Control unit MA

Hand wheel turns from $V_{g \text{ o}}$ to $V_{g \text{ max}}$
